Software development intern at AgRoss from May to October 2026: I was responsible for moving finance operations to the new ERP and built the system that monitors the company's customer-service AI, using Oracle, PL/SQL, PHP and JavaScript. In October 2026 I launched Meu Bolso, an open-source personal finance Android app built with React Native. Information Systems student at PUC-Campinas (2nd semester, evening program). Available to start immediately.

Experience

AgRoss | Paulínia, SP **2026**
Software Development Intern

- Was responsible for migrating the company's finance operations to the new ERP, with banking API integrations that ran without human intervention.
- Contributed to the migration of the logistics system, one of the core parts of the operation.
- Helped develop AgRoss Express, an AI agent that provides personalized customer service on WhatsApp.
- Built, from my own idea, a real-time monitoring system for the AI using the Meta API: conversations, quotes, failures, costs, revenue and the margin offered to customers. It was adopted by the company.
- Contributed to CRM AgRoss, a sales tool where sales reps create quotes through WhatsApp.
- Built web dashboards for sales and financial analysis.

ArcTest | Paulínia, SP **2025 – 2026**
Apprentice

- Reorganized 20 years of technical records, making document retrieval immediate.
- Created a new organization process for calibration blocks, improving lookup efficiency by about 200% and making audits easier.
- Formatted about 4 non-destructive testing reports per day, in Portuguese and English, following technical standards.
- Managed 200 to 300 operator certifications with full audit traceability.
- Provided direct support to the Technical Director.

Projects

Meu Bolso | otaviofelix-in.github.io/MeuBolso-Site **2026**
Personal finance Android app · React Native, Expo and SQLite

- Built it because no app showed the month the way I organize it: what comes in, what is already committed and what is left.
- Works offline, with no sign-up and no ads: credit cards with limits, installments spread over the coming months, reports, due-date reminders and fingerprint lock.
- Launched on Oct 19, 2026, with 4 updates driven by real-world use. Open source.

OffPilot | github.com/OtavioFelix-in/OffPilot **2026**
Claude Code plugin

- Apps built with Claude Code tend to all look the same. The plugin makes it ask what matters, propose a visual style tied to the product's industry and review its own work before delivering. Open source (MIT).

Studify | otaviofelix-in.github.io/Studify-Site **In progress**
Study planner Android app · React Native, Expo and SQLite

- Keeps exams, assignments and deadlines in one place, with reminders, calendar, Pomodoro timer, grade averages and a home-screen widget. Works offline.

EDUCATION / CREDENTIALS

- Pontifical Catholic University of Campinas (PUC-Campinas) — Campinas, SP, Brazil
  Bachelor's Degree in Information Systems (Evening Program) – 2nd Semester

- High School Diploma – Completed

Completed Courses

- Python Fundamentals — SENAI (30h)
- Java Foundations — Oracle Academy (30h)
- AI-900: Microsoft Azure AI Fundamentals — SENAI (40h)
- Power BI — SENAI (32h)
- Database Programming — SENAI (120h)
